GE Healthcare presenterar -

Dose Management Application – Can you leverage data and analytics to improve quality in your radiology department?

Antoine Jomier, GE Healthcare Europe

DoseWatch™ is a dose management and optimization software developed by GE Healthcare. DoseWatch™ enables radiologists to be aware of the dose they use for different imaging procedures by providing automatic tracking and analytics tools. It enables radiologist to be more in control of this exposure, to optimize the dose levels and protocols and manage and train the employees on dose usage in the department. DoseWatch™ helps find the lowest dose to get the highest level of image quality.
